5	Sequence Diagram: Add page to Event . . . . .	8

# 1 Introduction

## 1.1 Purpose

The purpose of this assignment is to work as a team and collaboratively to identify General Responsibility Assignment Software Patterns (GRASP) in the design of the CS Department Automated Information Timeline project. The team met multiple times over the course of a few days to work together and identify the GRASP concepts. Section 2 of this document consists of the identified GRASP concepts and section 3 contains the annotated sequence diagrams.

## 2 GRASP concepts

Table below lists all classes that appear in the sequence diagrams and under GRASP concept the class is suited for.

Controller	Creator	Information Expert	Low Coupling/High Cohesion
EventController ReviewController PostController MediaController	EventManager EventRepository NotificationRepository NotificationMapper PostRepository MediaRepository PageRepository	EventRepository NotificationRepository PostRepository MediaRepository PageRepository	EventService NotificationService ReviewService PostService MediaService DisplayService PageService

Table 1: Classes with the identified GRASP concepts

Low coupling and high cohesion is achieved by clearly separating out Controller, Service and Repository actions so that each class is only responsible for its specific layer of the application. This is also a core part of the MVC pattern which is known to be loosely coupled and highly cohesive.

The mapper classes (EventManager and NotificationMapper) were also identified as a creators because they are meant to be injected in service classes to create objects to be used as entities. Mapper classes support low coupling by removing a need for mapping user inputs directly to domain object needs and high cohesion by dealing only with JSON Serialization/deserialization of Event/EventDTO objects.

## 3 Annotated Sequence diagrams

A subset of sequence diagrams are annotated with the identified GRASP concepts and these are included below. These sequence diagrams cover all the classes and the GRASP patterns they implement.

### 3.1 Create Event

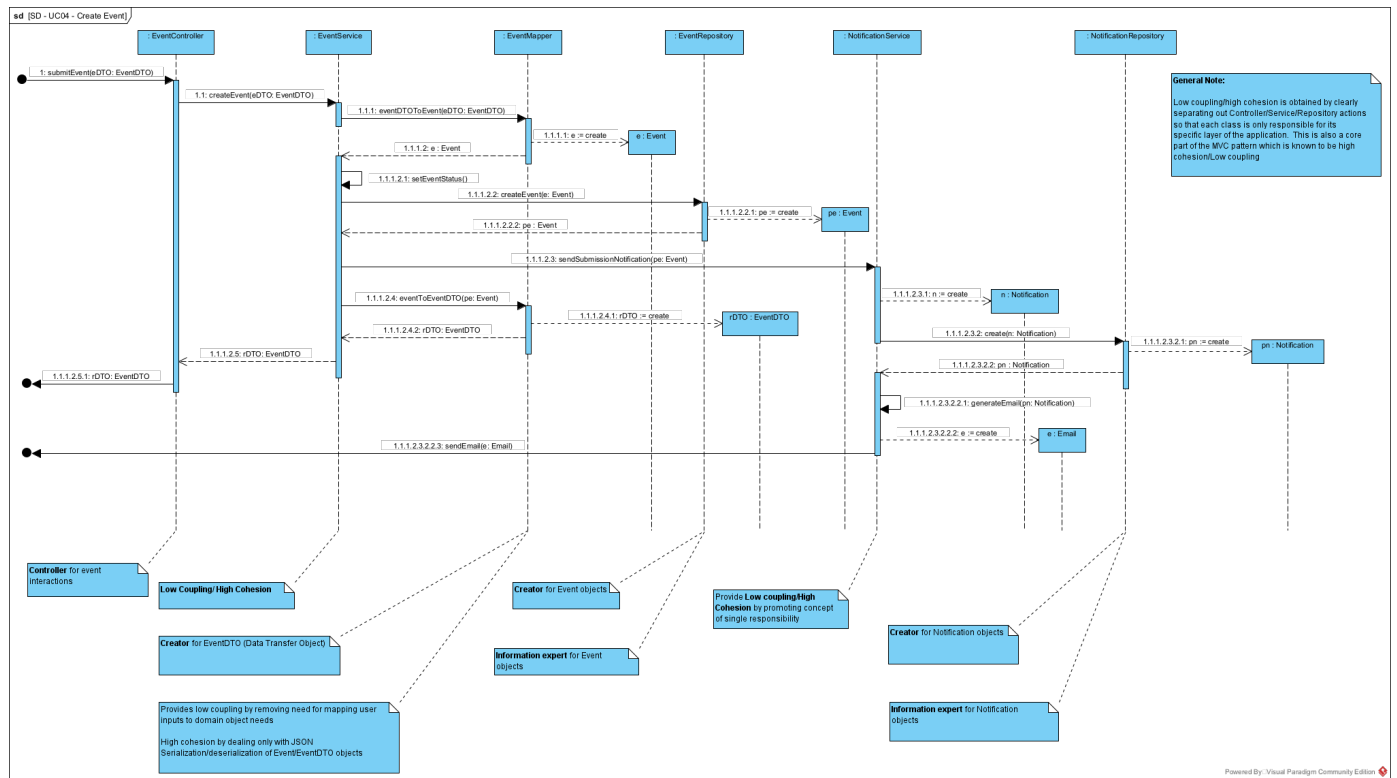

Figure 1: Sequence Diagram: Create Event

### 3.2 Review for Approval

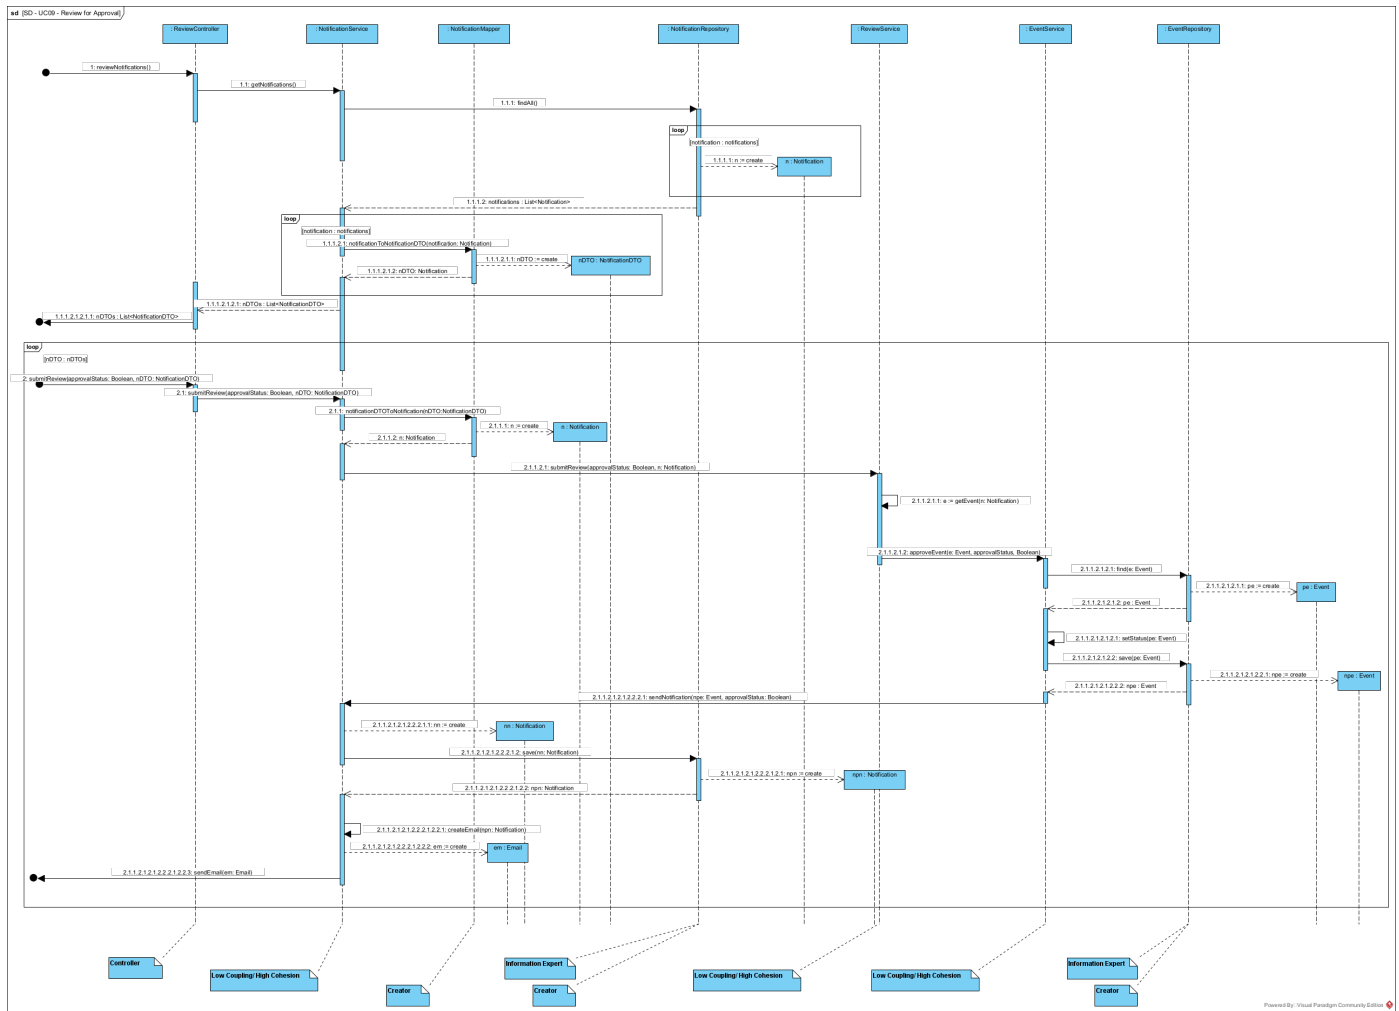

Figure 2: Sequence Diagram: Review for Approval

### 3.3 Edit Post

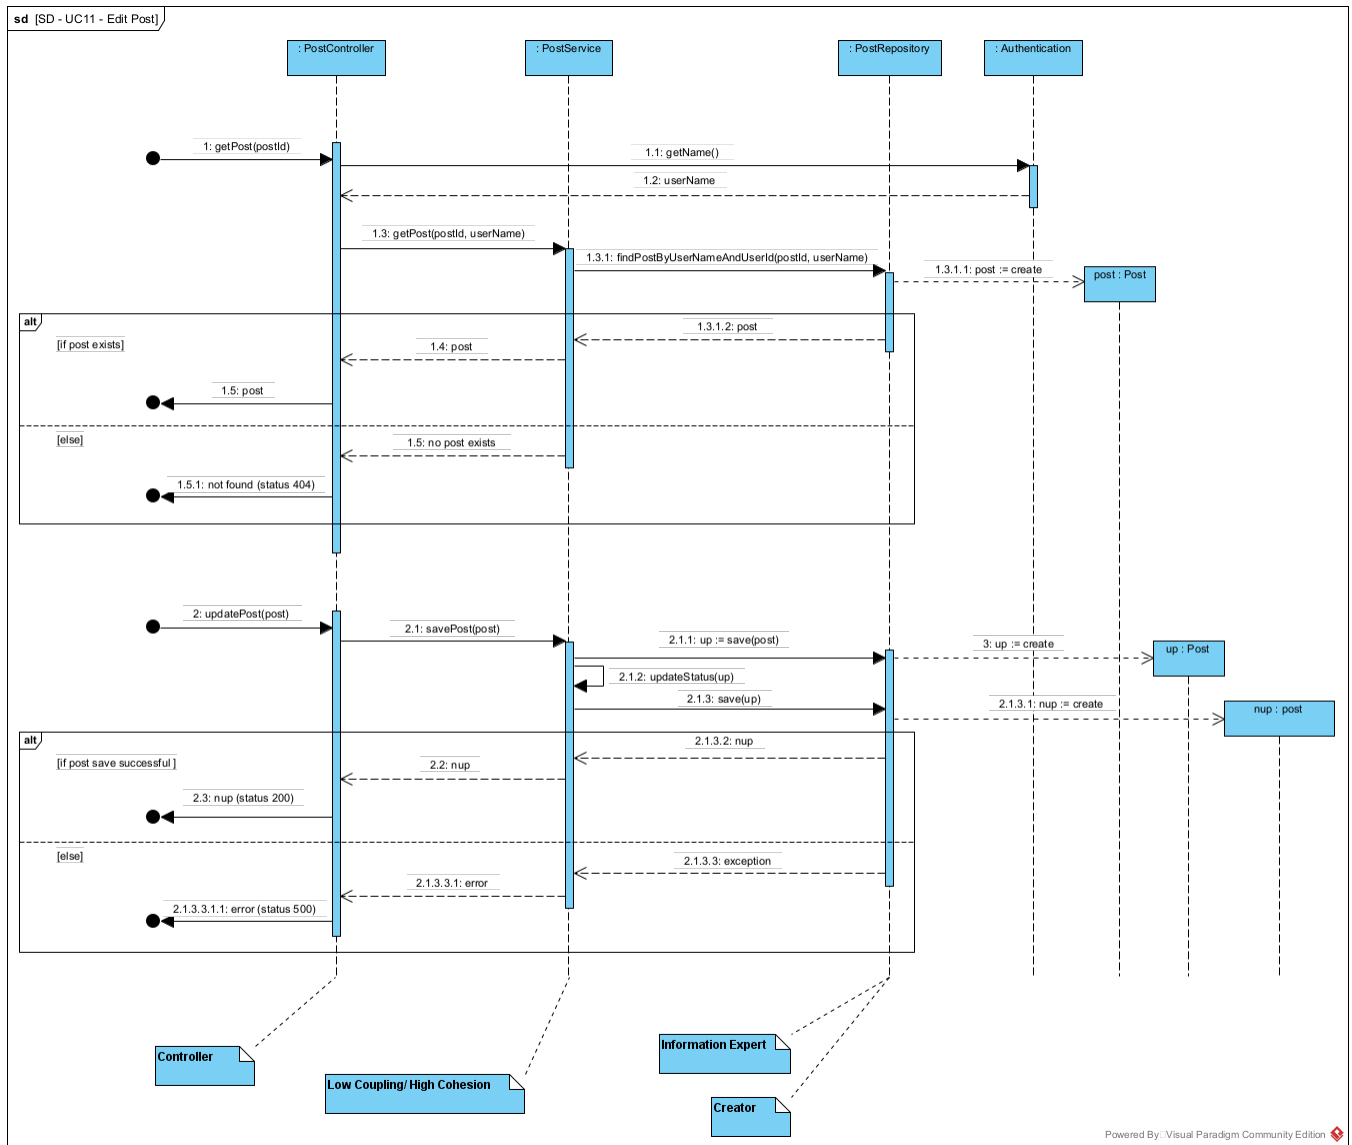

Figure 3: Sequence Diagram: Edit Post

### 3.4 Manage Displayed Media

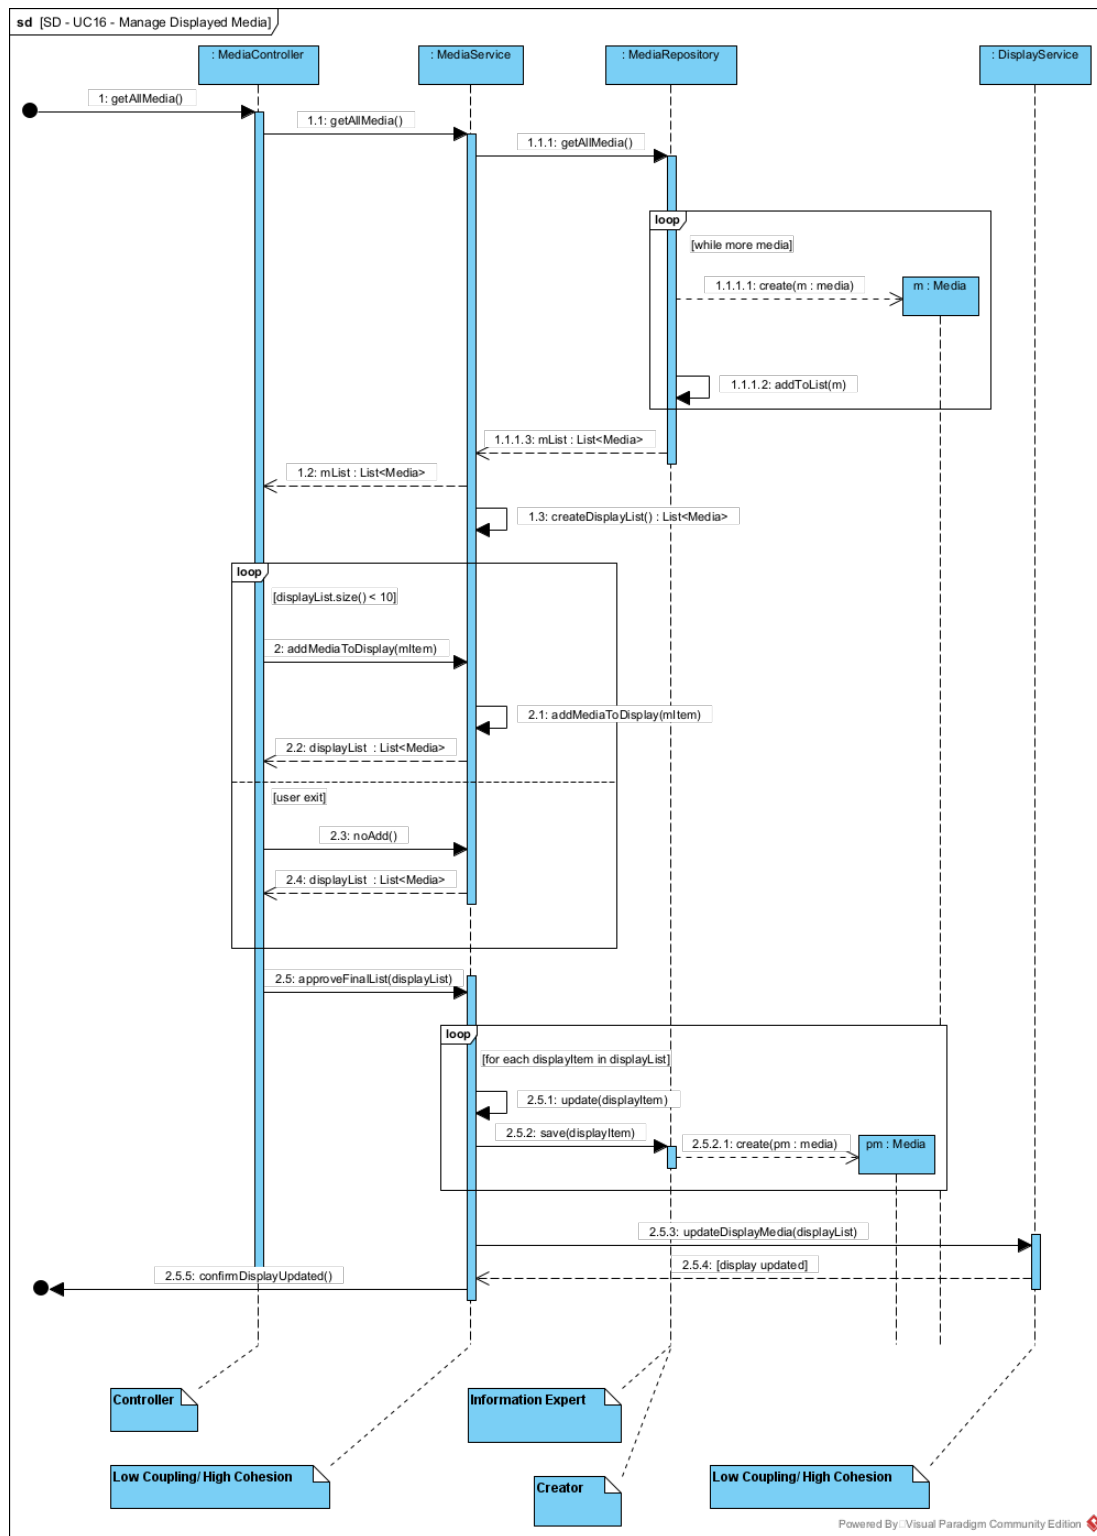

Figure 4: Sequence Diagram: Manage Displayed Media

### 3.5 Add Page to Event

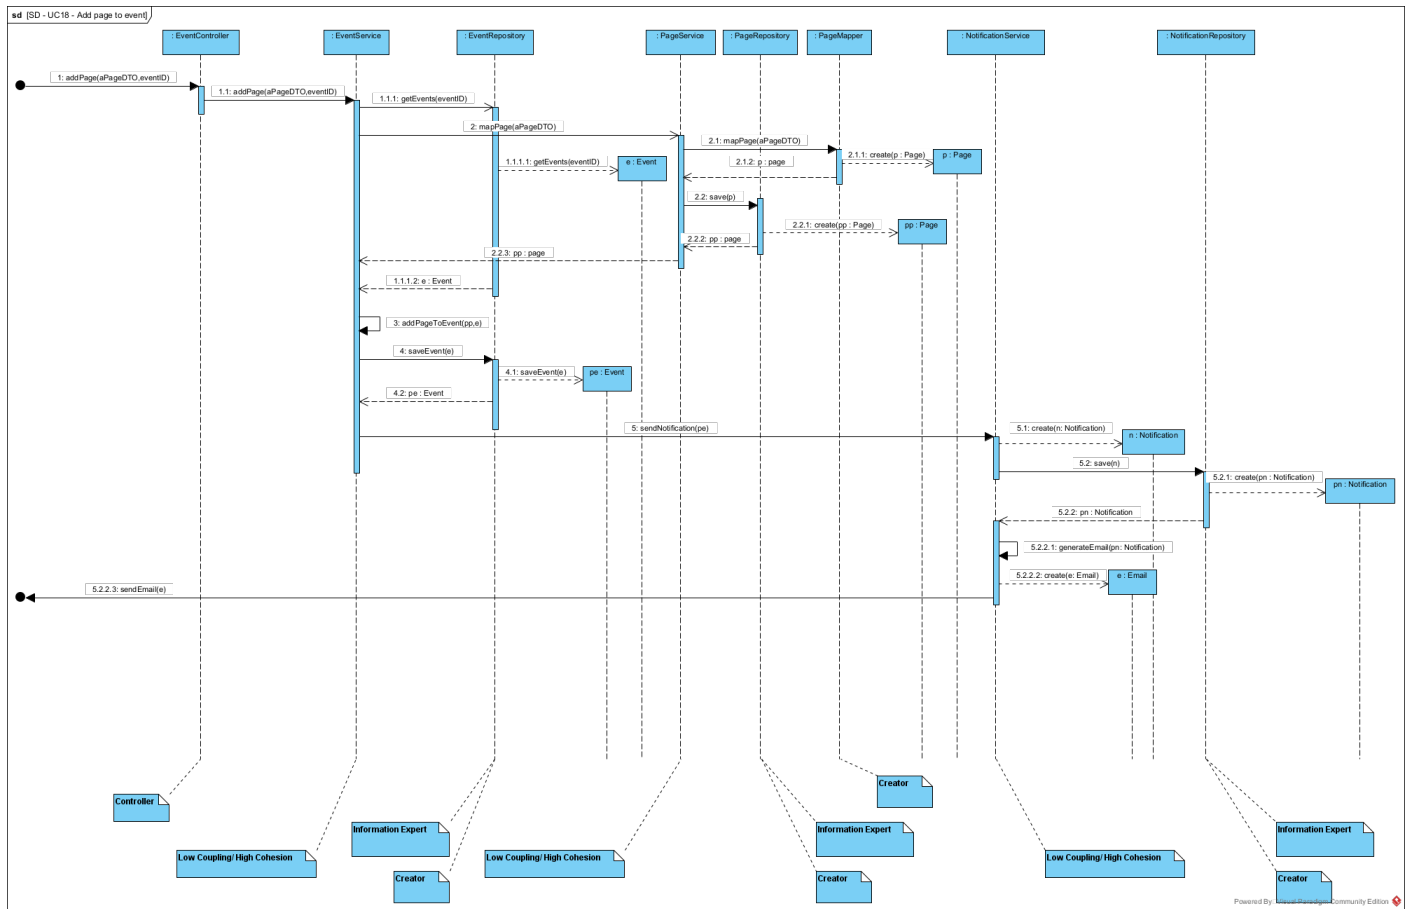

Figure 5: Sequence Diagram: Add page to Event
